

## **Business Solutions (Europe) Ltd. - QUICKSCRIPT**

If you experience any difficulties with installation or registration, please contact techsupport@winr3.com

### **1. INSTALLATION**

WinR3 QuickScript loads as an Add-In to Microsoft Excel, it is not a 'standalone' program.

The installation program is provided as a single self-contained executable. Running this file will automatically unpack all of the required installation files and launch the setup program. After the setup has completed, all temporary installation files will automatically be deleted.

An uninstall program is provided. This can be run directly or you can use the standard Windows Add/Remove Programs from the Control Panel (remove the entry 'WinR3 QuickScript').

#### **1.1 System Requirements**

You must have installed a version of Excel that is from Microsoft Office 2000 or above. Earlier versions of Excel use a different Add-In mechanism that is not compatible with QuickScript.

WinR3 QuickScript relies upon the SAP scripting API. This API is only supported in specific environments, eg. SAP GUI 6.20 and above (note that the version of the GUI is more important than the underlying SAP release).

Before running QuickScript you need to check that:

1. Scripting on the SAP Application Server, and on the SAP GUI for Windows client, is enabled.
2. That the Low speed connection option is NOT selected for the server to which you are connecting.

Full details on these configuration settings are contained in the User Guide.

### **2. REGISTRATION**

The unlicensed version of this product is fully functional but 'playback' is limited to 3 data records from the spreadsheet.

To register your copy of QuickScript press the 'Register' button on the reminder screen that pop-ups when you start QuickScript.

Online registration and activation is fully integrated. Several options are available. If an open internet connection is available then activation will be fully automated and seamless. If the PC that you have installed QuickScript on does not have access to the internet then an option is provided to activate the product from a different PC that does have an internet connection (this involves noting down some numbers from QuickScript, inputting these numbers to a website and being returned an activation key number which needs to be input to QuickScript - simply follow the instructions provided by the pop-ups from Help -> Register).

### **3. END USER LICENSE AGREEMENT**

See the User Guide for the full license agreement and conditions. Running this product constitutes acceptance of all license conditions.
