

## **Business Solutions (Europe) Ltd. – TRANSACT (V2.1)**

If you experience any difficulties with installation or registration, please contact [techsupport@winr3.com](mailto:techsupport@winr3.com)

### **1. INSTALLATION**

1.1 The Transact installation set is provided as a self-contained installation program. Running this file will automatically unpack all of the required installation files and launch the setup program. After the installation has been tested the temporary installation files will automatically be deleted.

1.2 This package has been tested on Windows XP, Windows 2000 and Windows NT. Performance/operation on other operating systems can not be assured.

1.3 On versions of Windows prior to XP the visual effects and appearance will be different to that seen on screen shots and in the manual. For best operation Windows XP is recommended.

1.4 This program requires 'Admin' rights to install. A version can be downloaded which will install without Admin rights but support is limited - see the support web page for more information.

1.5 If installing this package on a Windows 95/98 system, it will require DCOM98 to install and run properly. If this has happened to you then we recommend that, after your initial install of WinR3, that you install DCOM98 and then re-install WinR3.

DCOM98 can be found at:

[http://www.microsoft.com/com/dcom/dcom98/dcom1\\_3.asp](http://www.microsoft.com/com/dcom/dcom98/dcom1_3.asp)

It is also possible, but very, very unlikely that you may need to download and install Microsoft's Data Access Components. Normally these are installed with your operating system so this should only be necessary under exceptional circumstances. However, should you feel this is necessary, or if you simply wish to upgrade to the latest version of these components, the correct files for your operating system can be found at:

<http://msdn.microsoft.com/library/default.asp?url=/downloads/list/dataaccess.asp>

Because of the nature of Microsoft Data Access Components, Registry updates need to be made during the installation procedure. This means that, on Windows XP, NT and 2000, Admin rights are needed to install properly.

1.6 An uninstall program has been included. Additionally, the standard Windows Add/Remove Programs from Control Panel can also be used to remove the entry 'WinR3 Transact'.

1.7 During an uninstall, the database containing your saved recordings WILL NOT AUTOMATICALLY BE DELETED - this is to prevent against unintended deletion. If you do not intend to use WinR3 again you should manually delete this database. Note that, if you keep it, re-installing should not overwrite this database. However, it is recommended that you make a backup copy before re-installing. The database is named WinR3Data.mdb and is located in the install directory (usually c:\Program Files\Business Solutions\Transact).

1.8 Transact does not require a connection to SAP to import or edit recordings or even to generate batch input files - it can be run completely standalone. However, if you wish to retrieve field data descriptions from SAP, or run WinR3 Direct, then SAP GUI must be installed on the same PC as WinR3.

### **2. USER MANUAL**

The printable version of the online help is provided as part of the install kit but is also available for download in PDF format at the WinR3 website, [www.winr3.com](http://www.winr3.com).

### **3. PRODUCT REGISTRATION**

The unlicensed version of this product is fully functional but will only create output, generated batch input files, for 5 data records. To obtain a license key see Help -> Register when running the program.

Online registration and activation is fully integrated. Several options are available. If an open internet connection is available then activation will be fully automated and seamless. If the PC that you have installed Transact on does not have access to the internet then an option is provided to activate the product from a different PC that does have an internet connection (this involves noting some numbers from Transact, inputting these numbers to a website and being returned an activation key number which needs to be input to Transact - simply follow the instructions provided by the pop-ups from Help -> Register).

If you experience difficulties with activation then please contact [techsupport@winr3.com](mailto:techsupport@winr3.com) with your e-mail address, serial number and installation number.

#### 4. UPGRADING FROM WINR3 STANDARD OR WINR3 PROFESSIONAL

See the User Manual or on-line help.

#### 5. END USER LICENSE AGREEMENT

See the User Manual for the full license agreement and conditions. Running this product constitutes acceptance of all license conditions.
